

# KINESIOTAPE

## GROWING ROLE IN PEDIATRIC CARE

### WHAT IS KT TAPE?

- 100% made from a gentle cotton fiber strip, latex-free, medical grade acrylic adhesive
- Hypoallergenic
- Water-resistant
- Can be worn for multiple days
- Options for sensitive skin
- Tension on tape has the ability to relax or stimulate muscles

### HOW DOES IT WORK?

- Kinesiotaping (KT) works by providing increased stability and support to the muscles and joints without restricting joint range of motion.
- KT tape is best known for its' properties in reducing pain, swelling, and increasing blood flow by lifting the skin.
- It has recently gained popularity for its' treatment benefits in childhood and infancy.
- KT tape works by activating weak or injured muscles, providing inhibition for muscle overactivity, or assisting in biomechanical postural correction.

## TAPE FUNCTIONS

Accelerate healing

Improve posture

Increase endurance

Muscle relaxation

Proprioceptive awareness

Prevent overuse

Reduce swelling

CONNECTIONS  
PEDIATRIC THERAPY

"A MODALITY TO HELP KIDS  
PERFORM AT THEIR BEST!"

## PEDIATRIC USES

Kinesiotaping has shown proven clinical benefits in the following pediatric conditions:

- Gross motor delay
- Toe clawing
- Hemiplegia
- Brachial Plexus injuries
- Cerebral Palsy
- Growth spurts
- Abdominal support
- Torticollis
- Toe walking
- Supination/pronation foot positioning issues
- Decreased oral motor skills
- Joint hyper-mobility
- Scoliosis
- Low muscle tone
